**NEW MEXICO MATHEMATICS CONTENT STANDARDS, BENCHMARKS, & PERFORMANCE STANDARDS**  
**Publisher Alignment Analyses for Primary Tool of Instruction**

This correlation table/matrix is a tool to show alignment with New Mexico's Content Standards, Benchmarks, & Performance Standards and the proposed instructional material considered for adoption. The purpose is to demonstrate how your material can contribute to student achievement as measured against these Content Standards.

**Attach a completed copy of this document to each core basal sample you are submitting for review. You will submit 3 copies of each student & teacher edition for each title & other material deemed necessary to provide appropriate instruction, along with these alignment documents at the 2006 June Summer Institute. DO NOT SEND WITH THE RFP.**

**Mathematics Grades 9-12**

**Standard 2: ALGEBRA, FUNCTIONS, AND GRAPHS: Students will understand algebraic concepts and applications.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
A. Represent and analyze mathematical situations and structures using algebraic symbols.	1. Classify numbers and members of the following sets: <ul style="list-style-type: none"><li>• natural</li><li>• whole</li><li>• integers</li><li>• rationals</li><li>• irrationals</li></ul>	Covered in CORD Algebra	
	2. Simplify numerical expressions using the order of operations, including exponents.	Covered in CORD Algebra	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
D. Analyze changes in various contexts.	4. Analyze the general shape of polynomial expressions and equations for different degree polynomials (e.g., positive and negative general shapes for third-, fourth-, and fifth-degree polynomials).	Covered in CORD Algebra	
	5. Estimate the rate of change of a function or equation by finding the slope between two points on the graph.	Covered in CORD Algebra	
	6. Evaluate the estimated rate of change in the context of the problem.	Covered in CORD Algebra	
	7. Know Pascal's triangle and use it to expand binomial expressions that are raised to positive integer powers.	Covered in CORD Algebra	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

**Mathematics Grades 9-12**

**Standard 2: ALGEBRA, FUNCTIONS, AND GRAPHS**

**Guidance for Further Study**

**9-12 Topics for Further Study**

**Solving equations, inequalities and systems**

*(As students encounter ever more sophisticated mathematical situations, they will need to be able to generate and solve a variety of equations, inequalities, and systems. They begin by studying more complex linear and quadratic equations and systems.)* Students will be able to:

- solve three-by-three linear systems
- solve two-by-two linear quadratic and quadratic-quadratic systems
- solve and graph equations and inequalities involving absolute value
- solve quadratic inequalities by factoring

**Polynomials**

*(Students will extend the concept of solving linear equations to higher degree polynomials. These polynomials can be used to more accurately describe real-world phenomena.)* Students will be able to:

- factor polynomials of degree higher than two using the fundamental theorem of algebra (e.g. an  $n$ th degree polynomial has at most  $n$  distinct linear factors), integral and rational zero theorems, and factor and remainder theorems
- perform the four basic operations on complex numbers
- factor polynomials using complex numbers
- graph polynomials using the intermediate value theorem
- graph and interpret the conic sections

**Functions**

*(The language and properties of functions are essential to understanding the components of higher mathematics. Functions are the fundamental objects on which students operate in some higher mathematics and are among the building blocks of higher mathematics.)*

Students will be able to:

- find and use inverse functions involving ordered pairs, graphs, and explicit statements of a function rule
- examine and graph piece-wise defined functions, including the use of the properties of continuity and discontinuity
- graph rational functions and locate zeros and horizontal and vertical asymptotes

**Standard 3: GEOMETRY AND TRIGOMETRY: Students will understand geometric concepts and applications.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
A. Analyze characteristics and properties of two- and three-dimensional geometric shapes and develop mathematical arguments about geometric relationships.	1. Interpret and draw two-dimensional objects and find the area and perimeter of basic figures (e.g., rectangles, circles, triangles, other polygons [e.g., rhombi, parallelograms, trapezoids]).	259 458-461 462-464	
	2. Find the area and perimeter of a geometric figure composed of a combination of two or more rectangles, triangles, and/or semicircles with just edges in common.	258-261 458-461	
	3. Find and use measures of sides and interior and exterior angles of triangles and polygons to classify figures (e.g., scalene, isosceles, and equilateral triangles; rectangles [square and non-square]; other convex polygons).	225 258-259	
	4. Interpret and draw three-dimensional objects and find the surface area and volume of basic figures (e.g., spheres, rectangular solids, prisms, polygonal cones), and calculate the surface areas and volumes of these figures as well as figures constructed from unions of rectangular solids and prisms with faces in common, given the formulas for these figures.	605-611 596-604	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
B. Specify locations and describe spatial relationships using coordinate geometry and other representational systems.	1. Demonstrate understanding of the construction of the coordinate plane, know the names of the origin, coordinate axes and four quadrants, draw and label them correctly, find the coordinates of an indicated point, and plot a point with given coordinates.	Throughout Chapter 7	
	2. Determine the midpoint and distance between two points within a coordinate system and relate these ideas to geometric figures in the plane (e.g., find the center of a circle given two endpoints of a diameter of the circle).	390-396 518-519	
	3. Given two linear equations, determine whether the lines are parallel, perpendicular, or coincide.	155-161	
	4. Use basic geometric ideas (e.g., the Pythagorean theorem, area, and perimeter of objects) in the context of the Euclidean Plane, calculate the perimeter of a rectangle with integer coordinates and sides parallel to the coordinate axes and with sides not parallel.	421-426	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
D. Use visualization, spatial reasoning, and geometric modeling to solve problems.	1. Solve real-world problems using congruence and similarity relationships of triangles (e.g., find the height of a pole given the length of its shadow).	204-211	
	2. Solve problems involving complementary, supplementary, and congruent angles.	104-105	
	3. Solve problems involving the perimeter, circumference, area, volume, and surface area of common geometric figures (e.g., “Determine the surface area of a can of height $h$ and radius $r$ . How does the surface area change when the height is changed to $3h$ ? How does the surface area change when the radius is changed to $3r$ ? How does the surface area change when both $h$ and $r$ are doubled?”).	318 481-491 605-636	
	4. Solve problems using the Pythagorean theorem (e.g., “Given the length of a ladder and the distance of the base of the ladder from a wall, determine the distance up the wall to the top of the ladder”).	341-347	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
D. Use visualization, spatial reasoning, and geometric modeling to solve problems.	5. Understand and use elementary relationships of basic trigonometric functions defined by the angles of a right triangle (e.g., “What is the radius of a circle with an inscribed regular octagon with the length of each side being exactly 2 feet?”).	501-503	
	6. Use trigonometric functions to solve for the length of the second leg of a right triangle given the angles and the length of the first leg. (e.g., “A surveyor determines that the angle subtended by a two-foot stick at right angles to his transit is exactly one degree. What is the distance from the transit to the base of the measuring stick?”).	354-366	
	7. Know and use angle and side relationships in problems with special right triangles (e.g., 30-, 45-, 60-, and 90- degree triangles).	348-353	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

**Mathematics Grades 9-12**

**Standard 3: GEOMETRY AND TRIGONOMETRY**

**Guidance for Further Study**

**9-12 Topics for Further Study**

**Logs and exponential functions**

*(Logs and exponential functions provide tools for more sophisticated modeling and applications for understanding real-life phenomena. Higher mathematics requires regular and successful use of logs and exponents to move beyond polynomials.)* Students will be able to:

- operate with logs and exponential functions on the basis of their inverse relationship
- identify the concept of  $e$
- use exponential functions and common and natural logs to understand real-life situations (e.g., half-life, amortization, logistic growth)
- use logs and exponents to solve equations

**Trigonometry concepts**

*(Trigonometry allows a student to consider periodic functions)* Students will be able to:

- graph all six trigonometric functions using radian measure, their domains and ranges, and the exact values of the five angles of the six trigonometric functions
- demonstrate an understanding of trigonometric functions as circular functions using symmetry
- solve trigonometric equations
- verify trigonometric identities
- apply trigonometric functions to solve physical problems, including the use of the laws of sines and cosines

**Series and sequences**

*(As students progress toward higher mathematics, they will need an understanding of sequences and functions whose domains are sets of whole numbers as opposed to sets of real numbers [e.g., discrete functions versus continuous functions]. Infinite geometric series provide one way to begin a discussion about limits.)* Students will be able to:

- use algebraic techniques to generate the specific formulas for arithmetic and geometric sequences and series
- extend the concept of series to infinite geometric series
- use the language and notation of limits
- use mathematical induction to prove various mathematical statements

**Standard 5: DATA ANALYSIS AND PROBABILITY: Students will understand how to formulate questions, analyze data, and determine probabilities.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
B. Select and use appropriate statistical methods to analyze data.	1. Understand the meaning of measurement data and categorical data, and of the term “variable”.	Not covered	
	2. Understand the meaning of “univariate” (i.e., one variable) and “bivariate” (i.e., two variable) data.	Not covered	
	3. For univariate data, be able to display the distribution and describe its shape using appropriate summary statistics, and understand the distinction between a statistic and a parameter: <ul style="list-style-type: none"><li>• construct and interpret frequency tables, histograms, stem and leaf plots, and box and whisker plots</li><li>• calculate and apply measures of central tendency (mean, median, and mode) and measures of variability (range, quartiles, standard deviation)</li><li>• compare distributions of univariate data using back-to-back stem and leaf plots and parallel box and whisker plots</li></ul>	Covered in CORD Algebra	
	4. For bivariate data, be able to display a scatter plot and describe its shape: <ul style="list-style-type: none"><li>• fit a linear model to a set of data using technological tools</li><li>• describe and interpret the relationship/correlation between two variables using technological tools</li></ul>	416-420 447	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

**Mathematics Grades 9-12**

**Standard 5: DATA ANALYSIS AND PROBABILITY: Students will understand how to formulate questions, analyze data, and determine probabilities.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
C. Develop and evaluate inferences and predictions that are based on data.	1. Compare and draw conclusions between two or more sets of univariate data using basic data analysis techniques and summary statistics.	Covered in CORD Algebra	
	2. Draw conclusions concerning the relationships among bivariate data: <ul style="list-style-type: none"><li>• make predictions from a linear pattern in data</li><li>• determine the strength of the relationship between two sets of data by examining the correlation</li><li>• understand that correlation does not imply a cause-and-effect relationship</li></ul>	413-420	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

<b>Benchmark</b>	<b>Performance Standards</b>	<b>Publisher Citation (pages)</b>	<b>% Meets Standard*</b>
C. Develop and evaluate inferences and predictions that are based on data.	3. Use simulations to explore the variability of sample statistics from a known population and construct sampling distributions.	492	
	4. Understand how sample statistics reflect the values of population parameters and use sampling distributions as the basis for informal inference.	Covered in CORD Algebra	
	5. Evaluate published reports that are based on data by examining the design of the study, the appropriateness of the data analysis, and the validity of conclusions.	Covered in CORD Algebra	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

D. Understand and apply basic concepts of probability.	1. Explain the concept of a random variable.	Covered in CORD Algebra	
	2. Understand the concept of probability as relative frequency.	Covered in CORD Algebra	
	3. Use simulations to compute the expected value and probabilities of random variables in simple cases.	Covered in CORD Algebra	

**\*Objectives are clearly stated with measurable outcomes at 90% or above.**

C. Understand and apply basic concepts of probability.	4. Distinguish between independent and dependent events.	Covered in CORD Algebra	
	5. Understand how to compute the probability of an event using the basic rules of probability: <ul style="list-style-type: none"><li>• complement rule</li><li>• addition rule (disjoint and joint events)</li><li>• multiplication rule (independent events)</li><li>• conditional probability</li></ul>	Covered in CORD Algebra
